

Volodymyr Bondarenko

Experienced software engineer focused on creating things.

Relevant experience

Software engineer • **Vesper** Jan 2024 — now

- Developed and maintained large-scale fullstack features across the commodity trading platform using **Vue 3**, **Tailwind**, **Reka UI**, **Pinia**, **TypeScript**, **PHP (Laravel)**, **SQL** and **Meilisearch**; implemented **role-based access**, **REST API** endpoints, **database migrations**, and complex **business logic**.
- Configured and maintained **CI/CD pipelines** (**GitHub Actions**, **CircleCI**) for build, lint, type-check, send Slack notifications, test, and **Sentry** release tracking.
- **Led end-to-end development of the Bring Your Own Data project**, enabling enterprise clients to upload, manage, and visualize custom price series alongside Vesper market data; drove new client acquisition and adoption.
- **Built and maintained the Template Workspaces project** (**Laravel Nova**, **PHP**, **SQL**), enabling the customer success team to provision pre-configured client environments in minutes—**reducing onboarding setup time by 10x**.
- **Designed and shipped the Smoke Tests automation system**: on-demand staging environments seeded with production data, running **Playwright E2E tests** multiple times daily via **CircleCI with Slack notifications** on pass/fail.
- **Resolved critical performance bottlenecks** in high-volume dropdowns (5,680+ series) and the main dashboard: implemented **virtual scrolling**, **lazy loading**, and **SQL/API query optimizations**, cutting request count **from 9,940 to 5,223** in targeted flows and reducing dropdown open time to **under 200 ms**.
- Actively contributed to the shared **vesper-ui** component library (**Vue 3**, **Tailwind**, **Reka UI**), handling its deployment pipeline and integration across the platform.
- Co-authored a PHP unit-conversion library (open-sourced as [vesper/unit-conversion](#)), resolving long-standing silent conversion bugs and adopted platform-wide.
- Collaborated with the AI team on integrating a **chatbot** into the platform — analyzed integration requirements, evaluated architectural approaches, and contributed to implementation decisions to ensure a seamless fit within the existing product.
- Maintained broad test coverage using **Playwright** (E2E, component) and **PHP** (controller & repository tests); maintained technical documentation and contributed to sprint planning, quarterly goal-setting, and tech talks.

Software engineer • **Worth Internet Systems** Feb 2023 — 2024

- Worked across multiple client projects in cross-functional teams; participated in sprint planning, MVP workshops, and project closing meetings.
- Built UI for a **wind turbine simulation** tool and a **map-based event permit** application using **React**, **Next.js**, **Tailwind CSS**, and **ArcGIS** — implementing custom map markers, layers, and form validations.
- Developed a **React-based event pass scanning app** for on-site operations and integrated business logic into a company website using **EditorX**.

Front-End Developer • **Frozoneon** 2022 — 2023

- Developed new marketplace features and enhanced existing functionality using **Vue 2/3**, **Nuxt.js**, **Pinia**, **SCSS**, and **REST API** integrations
- Refactored legacy codebase to improve maintainability, performance, and scalability; implemented UI redesigns and optimized front-end architecture for faster load times.

Front-end developer • **QuintaGroup** 2021 — Jan 2022

- Developed core features of **Sourcery Platform** — a large-scale collaborative SaaS for the lighting industry — using **Vue.js**, **TypeScript**, **GraphQL (Apollo)**, and **SCSS**.
- Built complex UI components for real-time collaboration: spreadsheet-like schedule editor, product collections, and manufacturer portal.

Skills

Programming Languages

JavaScript, PHP, TypeScript, HTML, CSS, Sass, PHP, SQL

Libraries & Frameworks

Laravel, Vue, React, Next.js, Nuxt.js, Tailwind, Pinia, Playwright, Vitest, Highcharts, Reka UI, Google Maps API, axios

Tools & Platforms

Git, GitHub, CircleCI, Meilisearch, Sentry, Docker, Vercel, Figma, Lighthouse, Clockwork, PHPUnit

Education

National University Of Ivan Franko

Bachelor of Computer Science

Interests

Visit gym, listen records, play the guitar, meet friends and play favorite video games

Location

Amsterdam, NL

- Worked closely with designers on UI/UX improvements, maintaining visual consistency across multiple subsystems.

Front-end developer • **SureLock&Key** 2020 — Apr 2021

- Built an internal **CRM system** for tracking and assigning tasks to the U.S.-based technicians, integrating **Google Maps API** and **Apollo GraphQL** with **Vue.js** and **TypeScript**.
- Developed and maintained company websites using **Nuxt.js**, **React**, and **SCSS**; improved performance and SEO for faster load times.

Additional experience

Mentor — HTML/CSS/JS • **Logos IT Academy** Apr 2022 · 1 month

- Prepared and delivered course material to a group of 60 students; reviewed homework assignments, provided individual support, and evaluated student progress.

Front-end developer • **Freelance** 2019 — 2020

- Delivered client projects end-to-end based on requirements, using **HTML**, **CSS**, **JavaScript**, **Vue**, and **React**.
- Restructured and maintained existing pages, implementing fixes and UI improvements.
